Project Management System

Modern Web-Based Project Management Platform

Developed Using: HTML5 · CSS3 · JavaScript · LocalStorage · Bootstrap 5 · Chart.js

Team: Janaka Tejeswar (23AK1A3621)

· Rohith (23AK1A3632)

· Nani (24AK5A3604)

OVERVIEW

What Is This System?

A modern, browser-based platform designed to help teams efficiently manage projects, tasks, deadlines, and collaboration — entirely client-side, with no backend or database required.

Dashboard Analytics

Real-time project statistics and task insights at a glance

Task Management

Create, assign, prioritize, and track tasks with deadlines

Project Tracking

Monitor project status, progress, and milestones

Team Collaboration

Organize team members and manage workload distribution

Reports & Charts

Visual reports powered by Chart.js for data-driven decisions

Challenges We Solved

The Problem

Organizations frequently struggle with:

- Poor task tracking and accountability
- Missed deadlines due to lack of visibility
- Inefficient team coordination
- No centralized project overview

Our Solution

The Project Management System addresses these gaps with:

- Centralized project and task management
- Real-time progress tracking and dashboards
- Visual Kanban workflow management
- Deadline reminders and activity alerts

Result: Improved productivity, better visibility, and faster decision-making.

TECH STACK

Technology Stack

A fully front-end application—no server, no database. All data persists locally in the browser.

HTML5	Semantic structure and layout foundation
CSS3	Styling, animations, and responsive design
JavaScript	Core application logic and interactivity
Bootstrap 5	Responsive grid, components, and UI consistency
Chart.js	Dynamic charts and analytics visualizations
LocalStorage	Client-side data persistence without a backend

System Architecture

A clean, layered front-end architecture where all data flows through JavaScript into LocalStorage, enabling a fully functional app with zero server dependency.

The architecture separates concerns across four layers — UI, logic, storage, and presentation — ensuring maintainability and a clear data flow without any backend infrastructure.

Core Modules

CORE FEATURES

Key Features

Dashboard

Live project statistics, task analytics, and team workload overview — all in one view.

Project Management

Create projects, update statuses, and track progress with visual indicators.

Task Management

Assign tasks to team members, set priorities, and enforce deadline tracking.

Kanban Board

Drag-and-drop task cards across workflow stages for intuitive visual project management.

ADVANCED FEATURES

Going Beyond the Basics

Calendar Management

Track deadlines and upcoming milestones in a unified calendar view.

Reports & Analytics

Project completion reports, performance charts, and task statistics via Chart.js.

Theme Settings

Toggle between Light and Dark modes for personalized user experience.

Notifications

Task update alerts, activity tracking, and deadline reminders keep teams informed.

Calendar Management

(deadline tracking, event scheduling)

Reports and Analytics

(completion reports, performance charts, task stats)

Theme Settings

(light mode, dark mode toggle)

Notifications

(task updates, activity alerts, deadline reminders)

CONCLUSION

Summary & Roadmap

What We Achieved

- Easy, centralized project tracking
- Improved team management and accountability
- Visual workflow monitoring via Kanban
- Fully functional with zero backend

Future Enhancements

- User authentication & login system
- Cloud database integration
- Email & push notifications
- AI-based task suggestions
- Mobile application (PWA)
- Real-time team collaboration
